THE PROBLEM

Let's speak about Units

An air conditioning system has two main components: condenser and evaporator.

The evaporator (or indoor unit) generates cold air, by absorbing the one of the enclosed space in which it is inserted. The air is then cooled in the evaporator circuit and finally released by the fan of the air conditioner.

The condenser (or external unit) is rather known for its hottest circuit, which releases heat thanks to a fan that takes air from the outside and works it internally.

Evaporators and condensers are everywhere, even in refrigeration systems, including those used in supermarkets, restaurants and in private properties.

A deep and thorough cleaning intervention is definitely recommended.

Find out why ...

Dirty air, waste of energy, increased bill: this is the question!

The heat transfer takes place within the A/C system. This means that a large amount of air passes through filters and circuits of the unit, accumulating an important quantity of dirt, dust, oily or fatty matter, insects etc.

This generated barrier inhibits the heat transfer, affecting the energy consumption and the increase of the service costs.

Which is the Result?

- lower efficiency and performances.
- higher temperatures.
- a general increase of the operating costs.
- reduced air flow.
- growth of bacteria and mold.
- air contamination.
- poor indoor air quality and stale odors

A deeper cleaning of the Units: this is our Gospel!

A frequent and thorough cleaning program must be specifically designed in order to prevent and avoid the deterioration of the whole system.

We deeply know that normal treating processes are not sufficient: that is why our laboratories have defined the new cleaning standard for evaporators and condensers.

Every component has its own need in terms of therapy. Therefore Errecom has studied various dedicated solutions: a wide range of products, which proposes both acid and alkaline liquids, safe and ready-to-use ones. Cleaners that restore high air quality in any environment and, more generally, improve the efficiency of the system.

We Work to Save Life on Earth

Since 2001 we have been producing excellence in chemical solutions for refrigeration and air conditioning systems.

Our supply chain is 100% Made in Italy or 100% Made in Errecom, we would better say: we then check every single process and component, giving life to the highest quality products ever.

As a European Company we do endorse tightened laws and protocols which aim at the preservation of our planet: we act, work and produce in a green vision, being aware that there are places and values to be preserved over time.

For this reason we have designed a cleaners line which guarantees a much higher level of biodegradability, even if compared to the one required by the EU regulations in the field of chemical solutions. Furthermore the triggers of our cleaning products are composed of 100% recyclable plastic, in order to ensure that the recycling process will be both convenient and immediate.

EVAPORATOR CLEANERS

Chinook

Indoor Units Filter Cleaner
Alkaline - Ready to Use

Chinook is a cleaner specifically designed to clean the filters of every internal unit. Its composition is not aggressive for the system components and the operator, ensuring a deep action, thanks to a rapid and highly effective application.

Chinook removes easily smog, dust and mould, as well as microbial contaminants. This product has also a pleasant scent. It is a ready-to-use solution as it does not need to be diluted. Rinsing recommended.

The product is also suitable for the HACCP program.

Liquid Product Ready to Use

EVAPORATOR CLEANERS

EcoJab

Biodegradable Evaporator Cleaner

Alkaline - Dilution 1:6

EcoJab is an effective cleaner for evaporators.

EcoJab has been designed in absolute respect for the environment, as it does not contain acids, phosphates, solvents and soda. The biodegradability is guaranteed at very high levels, thanks to the use of natural surfactants: actually these components have a great level of biodegradability, which is even higher than the one required by the current European laws.

EcoJab is not aggressive for the materials and is therefore an extremely fast and effective cleaner. It is presented in a concentrated formula, therefore it is to be diluted 1: 6, in order to remove the most of organic residues, dust and mold.

EcoJab is safe for the operator and does not leave traces that can be harmful to the environment. It is also suitable for the cleaning of the evaporators that are settled in food processing rooms.

EVAPORATOR CLEANERS

DID YOU KNOW THAT...

Detergents may contain ingredients called surfactants, that allow to clean more effectively, but may also damage the water quality when they are released into the natural environment.

For this reason, their use must be carefully monitored: the EU Regulation establishes common rules to guarantee the selling and usage of detergents and surfactants, while providing a high degree of protection for the environment and human health.

Jab

Evaporator and Plastic Cleaner Alkaline - Dilution 1:5

Jab is a cleaner suitable for the treatment of evaporators and plastic materials. Ready-to-use, Jab is composed by surfactants used in cosmetics and is therefore usable in transiting food areas.

Its composition is biodegradable and not very aggressive: that is why **Jab** is neither dangerous for the operator, nor for the components of the system.

EVAPORATOR CLEANERS

Clench

Evaporator Cleaner with Anticorrosion Power
Alkaline - Dilution 1:5

Clench is an evaporator cleaner with an anti-corrosive effect.

This is a quick-to-use product and is effective for the treatment of indoor units.

Highly alkaline, **Clench** is just as functional as acid cleaner (thus acting on saline origin dirty), but still presenting a great safety level for the system components.

Diluted 1: 5, **Clench** easily removes and prevents the formulation of organic residues, grease, grime and corrosion.

This product is ideal for restoring neglected plants or the ones under severe environmental aggression as kitchens, food production, frying areas or slaughterhouses.

Clench can be used frequently to maintain both the efficiency of the conditioning system and the correct environmental sanitation.

EVAPORATOR CLEANERS

Luxedo

Scented Revitalizing Treatment for Evaporators Alkaline - Ready to Use

Luxedo is a regenerative scented treatment for evaporators.

Its quick and effective action is optimal for the complete maintenance of the indoor units.

Luxedo removes organic residues and dirt which has been accumulated over the years, slowing down their reappearance.

It also has an intense purifying and reconditioning action, even if it is not aggressive for the surfaces and the operator.

The product is also suitable for the HACCP program.

EVAPORATOR CLEANERS

Sword

Scented Revitalizing Treatment for Evaporators with Anticorrosion Power Alkaline - Dilution 1:3

Sword is a regenerative and perfumed fast-acting treatment.

Its effectiveness also acts against corrosion, ensuring a complete maintenance of the indoor units.

Sword is an alkaline cleaner, that also acts on an acid level, still remaining safe. Actually, this product removes and prevents the formulation of organic residues, grease, grime and corrosion. It also has an intense sanitizing action.

Sword is not aggressive for the surfaces and can be used frequently to maintain the efficiency of the air conditioning system. It is safe for the operator and leaves a fresh fragrance in the air.

Sword is suitable for the HACCP program.

EVAPORATOR CLEANERS

DID YOU KNOW THAT...

The HACCP (Hazard Analysis and Critical Control Points) is a protocol designed to prevent food contamination dangers.

It monitors the places where food processes take place and, consequently, where a danger of contamination is possible, both biological and chemical or physical.

This protocol, based on scientific precepts, is to be considered as systematic, since it has the purpose to develop suitable systems for the control of these processes, avoiding any danger.

The HACCP system promotes the concept of prevention and analyzes possible threats at every stage of the production process and in the immediate post-phases.

In this way, the chain is entirely monitored with the aim to protect what we know as public health.

SaniBact

Liquid Disinfectant for Surfaces
with Bactericide and Virucidal Efficacy
Dilution 1:25

SaniBact is a Disinfectant, specially developed for the cleaning of evaporators, ventilation channels and any surface where a deeper level of disinfection is needed.

SaniBact is also an effective cleaner, which guarantees the highest level of hygiene during the cleaning process.

As an HACCP product, **SaniBact** is ideal for the following applications:

hospitals, nursing homes, doctors' offices, clinics, schools, sports facilities, wellness centers, butchers, confectionery, bakeries, cafes and restaurants, ice cream parlors, hotels, meat processing industries, fish and vegetables.

The product does not release odors nor residues either.

Its disinfectant strength acts in just 5 minutes, allowing a very deep and rapid action.

SaniBact is a highly concentrated product: it requires a dilution 1:25.

SaniBact is effective against the following viruses:

Influenza, Hepatitis B/C, HIV, Rota viruses, Noro virus, and Ebola Virus

Concerning the bacteria, **SaniBact** passes the tests EN1276 EN 13697.

For molds, it passes the EN13697 test.

EVAPORATOR CLEANERS

Power Clean In

High Pressure Cleaner for Evaporators Ready to Use

Clean Power In is the perfect solution to clean evaporators, even if they are placed in locations that are difficult to access.

Clean Power In has been designed to achieve a consistently high delivery pressure, which allows to remove the dirt that accumulates between the plates.

The high pressure is combined with the cleaning action in order to increase the effectiveness of this product and to vigorously attack the dirt, without damaging the materials with aggressive substances.

Its powerful jet allows you to reach units installed a few meters away and can be a good alternative if you can not get them with the pressure washer.

Rinsing not required.

EVAPORATOR CLEANERS AND PURIFIERS IN AEROSOL CAN

Evaporator Cleaner Foam

Foam Cleaner for Evaporators - No Biocide

Evaporator Cleaner Foam purifies the air-flow duct, by absorbing and expelling all the contaminants that can affect air quality (dust, dirt, allergens or microorganisms). Unpleasant odors are eliminated and a fresh clean fragrance fills the air.

Thanks to its foam formulation, **Evaporator Cleaner Foam** perfectly adheres to the evaporator fins and guarantees a high degree of effectiveness.

Its long cannula allows the operator to get deep in the system, ensuring the best distribution of the product.

Evaporator Cleaner Liquid

Non-Foam Cleaner for Evaporators - No Biocide

Evaporator Cleaner Liquid cleanses the air distribution duct, by absorbing and expelling all the contaminants that can affect the air quality.

It eliminates bad odors and spreads a clean scent in the air.

Its special formulation has been designed to get dried quickly and do not damage the materials that are normally found in air conditioning systems.

Interior Purifier

Purifying Treatment for Interiors - No Biocide

Interior Purifier purifies the air inside a room, by removing any contaminants and leaving a pleasant scent in the environment.

Its continuous flow saturates the environment with product, without wetting or leaving any kind of residue. Molecules absorb air pollution contaminants and drag them to the ground without possibility of release. The product is available in 7 pleasant fragrances, in order to please everyone's tastes: Talc, Strawberry, Peach, Mint, Lemon, Vanilla and Green Apple.

For A/C Systems up to 12,000 Btu/H (3KW - 1 TONS) - For interiors up to 15 Sqm

Aria

Refreshener for Splits

Aria is a Split and Fan-coil freshener developed in Errecom Laboratories, it is on the market in four innovative scents: Mint, Vanilla , Lemon and Pure.

Aria is an innovative solution for the interior perfuming, it is designed with a material very similar to the split filters or fan-coils ones. This material does not detract the ventilation ability of the system while the fragrance is released, therefore it doesn't reduce the air conditioning cooling or heating performances. Each fragrance has a slow and lasting release, so everyone can enjoy being in an air-conditioned place. Air effectively covers bad odours that may arise inside an air-conditioning system, it is easy to apply and replace.

Condenser Cleaner with Anticorrosion Power
Alkaline - Dilution 1:3

Highly alkaline, **Chisel** is just as functional as acid cleaner (thus acting on saline origin dirty), but still presenting a great safety level for the system components.

Diluted 1:3, **Chisel** easily removes and prevents the formulation of dirt and corrosion.

This product is ideal to restore neglected plants or the ones under severe environmental aggression.

Chisel can be used frequently to maintain both the efficiency of the conditioning system and the correct environmental sanitation.

CONDENSER CLEANERS

Good Cond Cleaner

A/C and Refrigeration Condenser Cleaner
Alkaline - Dilution 1:2

Good Cond Cleaner is an alkaline cleaner for condensers in normal dirt conditions. Thanks to its properties, this is a great product to degrease and easily remove organic residues, stubborn fat, dust, pollen and smog.

Good Cond Cleaner ensures the right maintenance for the unit, without being aggressive and it is particularly suitable for degreasing thoroughly dirt in the cracks of finned coils.

Good Cond Cleaner is to be diluted 1:2.

CONDENSER CLEANERS

DID YOU KNOW THAT...

pH is the measure of a liquid acidity, which can range from 0 to 14.

0 - 6.9: there is has an acid condition.

7.2 – 14: there is an alkaline (or oxygenated) condition.

In chemistry applied to the cleaning of the A/C and refrigeration systems, the level of acidity or alkalinity of a cleaner determines its use and application: the alkaline-based products attackt actually greasy and oily origins dirts. On the contrary, the acid base cleaners guarantees a greater detergency in the case of saline dirt (as, for example, the salt that is formed in the sea locations).

Power Clean Out

High Pressure Cleaner for Condensers
Ready to Use

Power Clean Out has been designed to achieve a consistently high delivery pressure, which allows to remove the dirt that accumulates between the plates.

The high pressure is combined with the cleaning action in order to increase the effectiveness of this product and to vigorously attack the dirt, without damaging the materials with aggressive substances.

Its powerful jet allows you to reach units installed a few meters away and can be a good alternative if you can not get them with the pressure washer.

Rinsing not required.

No-Age

Protective-anticorrosive treatment for condensers

No-Age is a protective treatment, designed for all those systems that are exposed in highly oxidizing environments (seaside, heavily polluted sites) where salt and acid rain reduce significantly the condenser life.

Once you have cleaned the condenser with one of Errecom Cleaners, spray **No-Age** directly on it: this solution generates a microfilm that does not limit the heat exchange, but reduces the ability of dirt to cling to the surfaces, protecting the metals thanks to an anticorrosive barrier.

No-Age is an easy-to-use solution, which is safe for both for the operator and the materials. Thanks to its formulation, **No-Age** is able to extends the life of the condenser.

PROTECTIVE-ANTICORROSIVE TREATMENT FOR CONDENSERS

Evo Tabs

Purifying cleaner for Evaporators in Tablet
Alkaline - Dilution in 5l

Evo Tabs is an evaporator cleaner solution in tabs, projected in order to have to chance not to carry tanks of liquid.

One tablet of twenty grams only (useful to produce cleaner 5l) concentrates a significant degreasing and cleansing power and, at the same time, it releases a pleasant scent.

Evo Tabs can be dissolved in any water line, regardless of its hardness: this formulation eliminates the excesses of limestone and does not leave halos.

A single solution of **Evo Tabs** (dissolved in 5 liters of water) is shortly ready-to-use for the usage. It does not damage the components of the evaporators and the plastic surfaces.

Emerald Tabs

Biodegradable Eco Draining Tabs

Emerald Tabs MINI

Biodegradable Eco Draining Tabs

Emerald Tabs is an ultimate solution by Errecom, which has been specifically developed in order to avoid the formation of contaminants due to water stagnancy inside the A/C system. Thanks to their high biodegradability level (more than 99%), **Emerald Tabs** prevent and eliminate the putrefaction process and the formation of algae, mucilage, slime and moulds that risk to clog and block the condensate drain pipes of A/C systems without affecting and impacting the environment. Thanks to their dimensions **Emerald Tabs** are suitable for every kind of systems. A monthly usage of **Emerald Tabs** is highly recommended.

Drain Tabs

Tablets for Condensate Drain in Split and Fan-Coil - **No Biocide**

Drain Tabs is a product specifically developed for the use inside Fan-Coils and condensate collection trays. It prevents and eliminates the putrefaction process and the formation of algae, mucilage, slime and moulds that risk to clog and block condensate drain pipes of A/C systems. It is sufficient to place the tab inside the condensate drain duct of the fan-coil or inside the condensate collection tray of the split in the farthest point from the drainage discharge. The efficacy of the treatment depends on the use of the A/C system, but it is normally of 1 or 2 tablets every 15/20 days for units up to 12.000 Btu/H (3 KW - 1 TONS).

PURIFYING TREATMENTS FOR INTERIORS

Atom Machine

Ultrasonic Nebulizer

ATOM MACHINE an electronic ultrasonic nebulizer device designed to atomize liquids that are then distributed by the A/C System's Recirculation System for sanitizing and/or removing odours. The Atom system atomizes liquid to create large quantities of fine particles (less than 5 micron's in diameter) at ambient temperatures. Such small particles (<5microns) do not easily condense on the surfaces they encounter, hence, they fully propagate in the A/C system and room/cabin. The **ATOM MACHINE** is built to the highest specification and powered by the mains to ensure sufficient quantities of particles are generated to effectively eliminate all micro-organisms and odours. Where liquid is vaporized by heating to a high temperature or propelled via traditional aerosol, the active ingredients are not able to provide the deep penetration and coverage required to guarantee 100% effectiveness. The size and the weight of the particles delivered by heat or aerosol cause prompt precipitation and condensation.

12V Power cord for cigar lighter socket and cords for European, American, English and Australian socket included.

Features

- Operating temperature: 0°C ÷ 60°C.
- Nebulization rate: ≈ 390 ML /h.
- Dimensions: L170 x P110 x H170 mm.
- Weight: 0.7 Kg.

It includes the following power cords:

- 12V power cord for cigar lighter socket
- Bipolar socket with European plug
- Bipolar socket with American plug
- Bipolar socket with English plug
- Bipolar socket with Australian plug

Atom Liquid

Purifying Treatment for Atom Machine and Ultrasonic Nebulizers 250 ml (8.5 FL.OZ.)

Atom Liquid solutions are effective purifying treatments, to be used via Atom Machine and Ultrasonic Nebulizers.

Proposed in 250ml size, these products have to be inserted in the appropriate equipment and nebulized at ambient temperature in order to avoid the phenomenon of condensation.

Different fragrances are offered by Errecom, in order to satisfy everyone's tastes:

PURE: a marine note, which gives a pleasant feeling of clean atmosphere to the environment.

LEMON: an interesting citrus fragrance expands in the cockpits, leaving a sense of hygiene.

MINT: a classic and immortal fragrance. The mint will leave a pleasant sense of cool in the cockpit.

Recently developed, Atom Smoki and Atom Woofi are not to be considered as fragrances, as they solve odors problems from the basis:

SMOKI: in case of smoke and cigarettes odors, choose Atom Smoki in order to eliminate them.

WOOFI: Pets' bad smells can be easily neutralized thanks to this effective solution.

Pure Ozone Machine

Ozone-Generator

As a powerful antimicrobial agent, ozone neutralizes bacteria, molds, yeasts, as well as parasites and viruses.

As its presence is lower in the Earth's atmosphere (0.01 - 0.07 ppm), ozone helps to balance the amount of bacteria and molds that are found in nature.

Thanks to its high oxidizing power, ozone has a specific deodorant and disinfectant action.

The feeling of unpleasant odors in the air is caused by polluting substances which are essentially volatile chemical compounds. An ozone treatment not only creates a protective layer, but completely eliminates the malodorous components in the environment that has to be treated.

Ozone actually purifies thoroughly the surrounding air, eliminates any type of unpleasant odor, smoke, smell and even the residues of cigarettes: carbon monoxide (toxic gas) is thus converted into carbon dioxide (inert gas).

SOLAR PANELS CLEANERS

Apollo

Cleaner for Solar Panels
Alkaline - Ready to Use

Apollo is the complete cleansing treatment, designed for the maintenance of the solar panel performances. **Apollo** solves dirt or damage problems to the system, by avoiding its performance degradation.

It has been designed with a complete formula that improves the cleaning action and leaves a thin, anti-static and anti-corrosion film. **Apollo** does not perform absorbing actions, in order not to affect the performances of the panels.

For frequent maintenance, **Apollo** can be provided and rinsed without mechanical rubbing action.

For intense dirt, **Apollo** should be sprayed and brushed on the surface of the panel with a soft, non-abrasive sponge. Then rinse.
